

U.S. REPLY IN SUPPORT OF MOTION FOR STAY PENDING APPEAL (No. 2:17-cv-00289-RSM) - 1

Case 2:17-cv-00289-RSM Document 51 Filed 11/29/18 Page 2 of 8

irreparable harm should its appeal be authorized to proceed, the United States respectfully 1 2 requests that the Court grant its Motion. In support of that Motion, the United States responds to 3 mischaracterizations in Plaintiffs' Opposition, see ECF No. 50, as follows:

4 1. Plaintiffs claim that EPA's Motion should be denied because it is only aimed at 5 "further delay" and that EPA should instead "issue the temperature TMDL within the 30-day 6 deadline set by the CWA and the Court's order, or approach [] Riverkeeper to negotiate a 7 reasonable schedule for TMDL issuance" Opp. at 2. As the Declaration of Daniel D. Opalski explains, ECF No. 47-2 ("Opalski Dec."), EPA continues work apace on the TMDL 8 9 notwithstanding its request for a stay, so this Motion is not an effort to delay that TMDL work. 10 Id. P. 8, 13. Rather, it ensures that the United States is able to preserve for review any legal or 11 factual issues that the Office of the Solicitor General – in exercise of its duties to the American 12 public – determines warrant further review. It will also allow EPA, in the meantime, to ensure that any TMDL issued accords with the appropriate TMDL processes, including time for public 13 comment and coordination of implementation measures.² Opalski Dec. **PP** 12, 14-16. 14

15 2. Plaintiffs mischaracterize the state of the law in claiming that this case does not, at a minimum, raise "serious and difficult question of law." See Opp. at 3-4. To begin, Plaintiffs 16 ignore that *no circuit court* has ever allowed a single TMDL to give rise to a constructive submission. See S.F. Baykeeper v. Whitman, 297 F.3d 877 (9th Cir. 2002) (constructive 18

¹⁹

² Plaintiffs suggest that EPA could have avoided the need for its Motion by approaching them to "negotiate a reasonable schedule." This is entirely misplaced. Whether a party is entitled to a stay does not turn on whether that party might avoid harm through some purely speculative settlement. In any case, as the United States has explained, see ECF No. 40, it could not pursue any such settlement in advance of its Motion because its internal review process to authorize an appeal, or other next steps, is not yet complete. The United States sought a brief delay of the Court's Order to allow that internal process to conclude before compliance with the Order's deadlines became imminent and necessitated this filing, but that request - which Plaintiffs opposed – was denied. See ECF No. 44.

submission inapplicable because California had submitted some TMDLs); Hayes v. Whitman, 1 2 264 F.3d 1017 (10th Cir. 2001) (constructive submission inapplicable because Ohio had 3 submitted some TMDLs); Scott v. City of Hammond, 741 F.2d 992 (7th Cir. 1984) (remanding and explaining that there would be no constructive submission if "the states are, or will soon be, 4 5 in the process of submitting TMDL proposals or [if] some other factor ... has made TMDL 6 submissions impracticable"). Plaintiffs further ignore that – excepting this case, and the district 7 court opinion in Ohio Valley Environmental Coalition v. McCarthy, which was recently 8 overturned by the Fourth Circuit – only one court has ever actually "applied the [constructive 9 submission] doctrine to force EPA action," and did so only where it was "undisputed" that the 10 state "ha[d] not submitted a single TMDL to EPA" in over ten years, *Ohio Valley Environmental* Coalition v. McCarthy, 893 F.3d 225, 230 (4th Cir. 2018) (describing and quoting Alaska Ctr. 11 12 for the Envt. v. Reilly, 762 F. Supp. 1422, 1425 (W.D. Wash. 1991)). Plaintiffs also incorrectly 13 claim that "[w]hen this Court issued its Order on summary judgment, it followed [] precedent" 14 set by Sierra Club v. McLerran, Las Virgenes Municipal Water District v. McCarthy, and Ohio Valley. See Opp at 4. These cases were not precedent for this Court and will not be precedent for 15 the Ninth Circuit. First, as district court opinions, they have only persuasive value. More 16 17 importantly, they do not represent settled law. The McLerran court's discussion of the theoretical reach of the constructive submission theory was dicta. See No. 11-1759, 2015 WL 1188522 18 19 (W.D. Wash. Mar. 16, 2015). The Las Virgenes case did not find a constructive submission, and 20 only upheld a consent decree in a case in which EPA did not contest that theory. See No. 15-21 0271, 2017 WL 600102 (S.D. W.Va. Feb. 14, 2017). And the Ohio Valley case, as Plaintiffs are 22 well aware, was reversed on appeal to the Fourth Circuit because West Virginia "has produced at 23 least some TMDLs" and "has a credible plan in place to produce others." 893 F.3d at 230-31.

Case 2:17-cv-00289-RSM Document 51 Filed 11/29/18 Page 4 of 8

Notably, the Fourth Circuit explicitly refused to decide whether the constructive submission
theory itself is lawful. *Id.* at 231.

3. 3 Plaintiffs are incorrect that the Court's Order has no jurisdictional flaw because it "ordered precisely what the Clean Water Act requires." Opp. at 4. The Act only allows suit 4 5 against EPA – and thus grants this Court jurisdiction – where there is "a failure of [EPA] to 6 perform" a non-discretionary act. 33 U.S.C. § 1365(a)(2). EPA has not yet failed to comply with 7 Section 303(d)(2)'s requirement to issue a TMDL within 30 days of its disapproval of a state 8 submission, see 33 U.S.C. § 1313(d)(2), so there is no "failure" that would allow Plaintiffs to 9 bring suit to compel issuance of the TMDL. An opinion that "does nothing more than simply 10 restate what the CWA explicitly requires," Opp. at 5, is - at this stage - an advisory opinion and so the Order's deadline for issuing the TMDL was beyond this Court's jurisdiction. For the same 11 12 reason, Plaintiffs' bald assertion that they "clearly ha[ve] standing to pursue this claim because 13 EPA has disapproved the states' submissions," Opp. at 5 n.1, is incorrect as a matter of law. EPA 14 had not disapproved the states' alleged constructive submissions when the Complaint was filed, 15 see Order at 15, and EPA is not yet in violation of any additional duties triggered by its recent disapproval on November 16, 2018. As such, no cause of action has yet accrued, and Plaintiffs 16 17 have not yet acquired standing, to sue the United States for issuance of the TMDL.

Plaintiffs claim it is insufficient for the United States to assert harm absent a stay
because the Ninth Circuit "might" find the appeal moot. Plaintiffs go so far as to say that, "If
EPA *itself* cannot decide whether its appeal would be mooted, EPA cannot demonstrate the level
of certain harm required to obtain a stay." Opp. at 4-5. But EPA is not an Article III court, so it is
not for EPA to decide whether its appeal will be mooted by action to issue the TMDL. Nor is
Ninth Circuit precedent clear on this point and Plaintiffs themselves point to no authority to

dispute that EPA risks mooting higher court review of the questions at issue in this case. The
Court should exercise "the utmost caution" to avoid creating a "mootness Catch-22" by
compelling EPA to choose between compliance with the Order and the possibility of mooting
any appeal. *See Protectmarriage.com—Yes on 8 v. Bowen*, 752 F.3d 827, 838 (9th Cir. 2014).

5 5. Plaintiffs are incorrect that the harm EPA faces absent a stay, outlined in the 6 Opalski Declaration, Opalski Dec. PP 3-4, 12, 14-16, should be ignored because EPA could have 7 issued this TMDL earlier and so such harm is "self-inflicted." Opp. at 6. The question before the 8 court on a motion for stay pending appeal is whether denial of relief would create irreparable 9 harm *now*, not whether such harm could have been prevented by taking different steps before the commencement of litigation. See, e.g., Humane Soc. v. Gutierrez, 523 F.3d 990, 991 (9th Cir. 10 11 2008). In any event, Plaintiffs' attempts to minimize the harm to EPA are unsupported and 12 contrary to the statements of EPA's sworn declarant. For example, Plaintiffs claim that the 13 typical three- to five-year schedule for completing a TMDL is not relevant here because it 14 "ignores the years EPA spent drafting this TMDL that was nearly final in 2003," Opp. at 6, and 15 that there is no harm in proceeding without public engagement on this TMDL because "a Draft TMDL was released for public comment more than a decade ago," *id.* at 7. Both assertions 16 17 ignore the fact, attested to by EPA's declarant, that completing the present TMDL requires 18 "significant updates to virtually all of the TMDL developmental work that EPA had conducted in 19 the early 2000s." Opalski P 8. So while EPA resumed work on the TMDL in 2017, see Opalski 20 **P** 8, 17, EPA is still well short of a typical three- to five-year schedule for TMDL preparation 21 (and for a TMDL that is hardly typical). Indeed, Plaintiffs themselves imply that requiring EPA 22 to finish the TMDL by December 17 is unreasonable, stating that instead of meeting the Court's 23 30-day deadline, EPA could have approached Plaintiffs about settlement to "negotiate a

24

Case 2:17-cv-00289-RSM Document 51 Filed 11/29/18 Page 6 of 8

reasonable schedule for TMDL issuance" Opp. at 1 (emphasis added).

2 6. Riverkeeper's dual claims that (1) "[t]he balance of equities . . . tips in 3 Riverkeeper's favor" because the TMDL will address environmental injury, Opp. at 8, and that 4 (2) no harm attaches to EPA's inability to allow for public input or coordinate implementation of 5 the TMDL before issuance, id. at 7, are contradictory. A TMDL is not self-implementing and 6 does not, by itself, address environmental injury, see Pronsolino v. Nastri, 291 F.3d 1123, 1129 7 (9th Cir. 2002); only coordinated implementation of the TMDL through other CWA provisions 8 and efforts by and with states, federal agencies, and other parties can begin to address an 9 environmental harm. Opalski Dec. PP 5-6, 14, 16. So absent successful stakeholder coordination 10 and implementation, this TMDL cannot address environmental injury. Id. And yet Plaintiffs also 11 claim that denying the United States' Motion, which they do not dispute will require EPA to 12 issue a TMDL before such coordination can take place and such implementation measures can be 13 discussed, does not pose any irreparable harm. Opp. at 7. Plaintiffs fail entirely to acknowledge 14 that delaying public process, coordination, and implementation discussions until after issuance 15 will not merely delay these efforts "by a few weeks." Opp. at 7. Rather, it will create broader inefficiencies that will affect implementation of the TMDL and may, in fact, require its 16 17 subsequent revision, see Opalski Dec. PP 12, 14-16 – which would in turn delay, rather than 18 advance, efforts to address environmental harm. Accordingly, Plaintiffs are incorrect that denying EPA's Motion for a stay favors faster amelioration of high water temperatures and are therefore incorrect that the harms and equities here weigh against a stay.

1

WHEREFORE, the United States respectfully requests that the Court grant its Motion for Stay Pending Appeal, ECF No. 47, and stay the Court's October 17, 2018 Order pending appeal.

DATED: November 29, 2018

Respectfully submitted,
